Abstract

The purpose of this study was to determine the attitude towards online classes among the BS Cruise Ship Management students of John B. Lacson Foundation Maritime University – Molo, Inc. This study was conducted during the first semester of Academic Year 2020 – 2021. The participants of this study were the thirty (30) randomly selected students of third year BS Cruise Ship Management. A Checklist was used to gather the data needed for this study. The t-test was used to find out the significant difference existing in two variables. The variables were sex which was categorized as male and female and home location which was categorized as City and Province. The results revealed that the BSCSM 3rd year students of JBLFMU-Molo have a "neutral" attitude towards online classes. When the students were grouped according to sex and home location, both male and female students have a "neutral" attitude towards online classes. When the students were group according to their home locations, both students who live in the City and Province have a "neutral" attitude towards online classes. It was also found out that there is no significant difference in the attitude mean towards online classes when the students were grouped according to sex. There is also
