ABSTRACT

This study aims to develop an automated payroll system of John B. Lacson Foundation, Inc. - Trainers using Visual Basic Programming Language with the help of database using Microsoft Access. The software is intended to give probable benefits to the personnel involve in the company. It will also provide assistance to the trainers in assessing their pay slip. The study includes all information, availability and computations of the trainer's salary. Furthermore, the system will generate reports of the pay slip of the trainers, the basic pay, total deduction, gross income and the net pay.

Figures on the data flow of the proposed system are included in this document to guide users in understanding the program.
