Pitzer, and Scripps Colleges

A Project of the American Chemical Society

<i>Preface</i>	xi	<b>Chapter 2</b>	
<b>Chapter 0</b>		<b>Protecting the Ozone Layer</b>	64
<b>Chemistry for a Sustainable Future</b>	2	2.1 Ozone: What and Where Is It?	65
0.1 The Choices We Make Today	4	2.2 Atomic Structure and Periodicity	68
0.2 The Sustainable Practices We Need for Tomorrow	5	2.3 Molecules and Models	71
0.3 The Triple Bottom Line	7	2.4 Waves of Light	75
0.4 Cradle-to-Where?	8	2.5 Radiation and Matter	78
0.5 Your Ecological Footprint	9	2.6 The Oxygen–Ozone Screen	80
0.6 Our Responsibilities as Citizens and Chemists	12	2.7 Biological Effects of Ultraviolet Radiation	82
0.7 Back to the Blue Marble	13	2.8 Stratospheric Ozone Destruction: Global Observations and Causes	85
<b>Questions</b>	14	2.9 Chlorofluorocarbons: Properties, Uses, and Interactions with Ozone	88
<b>Chapter 1</b>		2.10 The Antarctic Ozone Hole: A Closer Look	92
<b>The Air We Breathe</b>	16	2.11 Responses to a Global Concern	94
1.1 What's in a Breath?	17	2.12 Replacements for CFCs and Halons	96
1.2 What Else Is in a Breath?	21	2.13 Replacements for the Replacements	98
1.3 Air Pollutants and Risk Assessment	23	<b>Conclusion</b>	101
1.4 Air Quality and You	26	<b>Chapter Summary</b>	101
1.5 Where We Live: The Troposphere	29	<b>Questions</b>	102
1.6 Classifying Matter: Pure Substances, Elements, and Compounds	30	<b>Chapter 3</b>	
1.7 Atoms and Molecules	33	<b>The Chemistry of Global Climate Change</b>	106
1.8 Names and Formulas: The Vocabulary of Chemistry	35	3.1 In the Greenhouse: Earth's Energy Balance	108
1.9 Chemical Change: The Role of Oxygen in Burning	36	3.2 Gathering Evidence: The Testimony of Time	111
1.10 Fire and Fuel: Air Quality and Burning Hydrocarbons	39	3.3 Molecules: How They Shape Up	116
1.11 Air Pollutants: Direct Sources	42	3.4 Vibrating Molecules and the Greenhouse Effect	121
1.12 Ozone: A Secondary Pollutant	46	3.5 The Carbon Cycle	124
1.13 The Inside Story of Air Quality	49	3.6 Quantitative Concepts: Mass	126
1.14 Back to the Breath—at the Molecular Level	53	3.7 Quantitative Concepts: Molecules and Moles	128
<b>Conclusion</b>	56	3.8 Methane and Other Greenhouse Gases	130
<b>Chapter Summary</b>	57	3.9 How Warm Will the Planet Get?	133
<b>Questions</b>	57		

3.10 The Consequences of Climate Change	138
3.11 What Can (or Should) We Do About Climate Change?	142
<b>Conclusion</b>	<b>148</b>
<b>Chapter Summary</b>	<b>148</b>
<b>Questions</b>	<b>149</b>

## Chapter 4

<b>Energy from Combustion</b>	<b>154</b>
4.1 Fossil Fuels and Electricity	156
4.2 Efficiency of Energy Transformation	159
4.3 The Chemistry of Coal	161
4.4 Petroleum and Natural Gas	166
4.5 Measuring Energy Changes	171
4.6 Energy Changes at the Molecular Level	175
4.7 The Chemistry of Gasoline	178
4.8 New Uses for an Old Fuel	181
4.9 Biofuels I—Ethanol	183
4.10 Biofuels II—Biodiesel	187
4.11 Biofuels and the Way Forward	191
<b>Conclusion</b>	<b>195</b>
<b>Chapter Summary</b>	<b>196</b>
<b>Questions</b>	<b>196</b>

## Chapter 5

<b>Water for Life</b>	<b>202</b>
5.1 The Unique Properties of Water	204
5.2 The Role of Hydrogen Bonding	206
5.3 The Water We Drink and Use	208
5.4 Water Issues	212
5.5 Aqueous Solutions	216
5.6 A Closer Look at Solutes	219
5.7 Names and Formulas of Ionic Compounds	222
5.8 The Ocean—An Aqueous Solution with Many Ions	225
5.9 Covalent Compounds and Their Solutions	227
5.10 Protecting Our Drinking Water: Federal Legislation	230
5.11 Water Treatment	234
5.12 Water Solutions for Global Challenges	237
<b>Conclusion</b>	<b>241</b>
<b>Chapter Summary</b>	<b>241</b>
<b>Questions</b>	<b>242</b>

## Chapter 6

<b>Neutralizing the Threats of Acid Rain and Ocean Acidification</b>	<b>246</b>
6.1 What Is an Acid?	248
6.2 What Is a Base?	249
6.3 Neutralization: Bases Are Antacids	251
6.4 Introducing pH	253
6.5 Ocean Acidification	254
6.6 The Challenges of Measuring the pH of Rain	256
6.7 Sulfur Dioxide and the Combustion of Coal	261
6.8 Nitrogen Oxides and the Combustion of Gasoline	263
6.9 The Nitrogen Cycle	264
6.10 $\text{SO}_2$ and $\text{NO}_x$ —How Do They Stack Up?	268
6.11 Acid Deposition and Its Effects on Materials	270
6.12 Acid Deposition, Haze, and Human Health	274
6.13 Damage to Lakes and Streams	278
<b>Conclusion</b>	<b>280</b>
<b>Chapter Summary</b>	<b>280</b>
<b>Questions</b>	<b>281</b>

## Chapter 7

<b>The Fires of Nuclear Fission</b>	<b>286</b>
7.1 Nuclear Power Worldwide	288
7.2 How Fission Produces Energy	290
7.3 How Nuclear Reactors Produce Electricity	296
7.4 What Is Radioactivity?	299
7.5 Looking Backward to Go Forward	302
7.6 Nuclear Radiation and You	306
7.7 The Weapons Connection	312
7.8 Nuclear Time: The Half-Life	315
7.9 Nuclear Waste: Here Today, Here Tomorrow	319
7.10 Risks and Benefits of Nuclear Power	323
7.11 A Future for Nuclear Power	325
<b>Conclusion</b>	<b>328</b>
<b>Chapter Summary</b>	<b>328</b>
<b>Questions</b>	<b>329</b>

**Chapter 8****Energy from Electron Transfer 334**

- 8.1 Batteries, Galvanic Cells, and Electrons 336
- 8.2 Other Common Galvanic Cells 339
- 8.3 Battery Ingredients: Cradle-to-Cradle 342
- 8.4 Hybrid Vehicles 345
- 8.5 Fuel Cells: The Basics 348
- 8.6 Hydrogen for Fuel Cell Vehicles 352
- 8.7 Photovoltaic Cells: The Basics 356
- 8.8 Electricity from Renewable (Sustainable) Sources 364

- Conclusion 366**
- Chapter Summary 367**
- Questions 367**

**Chapter 9****The World of Polymers and Plastics 372**

- 9.1 Polymers Here, There, and Everywhere 373
- 9.2 Polymers: Long, Long Chains 374
- 9.3 Adding Up the Monomers 375
- 9.4 Polyethylene: A Closer Look 377
- 9.5 The "Big Six": Theme and Variations 381
- 9.6 Condensing the Monomers 385
- 9.7 Polyamides: Natural and Nylon 389
- 9.8 Dealing with Our Solid Waste: The Four Rs 391
- 9.9 Recycling Plastics: The Bigger Picture 395
- 9.10 From Plants to Plastics 400
- 9.11 Shifting Baselines 401

- Conclusion 404**
- Chapter Summary 405**
- Questions 405**

**Chapter 10****Manipulating Molecules and Designing Drugs 410**

- 10.1 A Classic Wonder Drug 411
- 10.2 The Study of Carbon-Containing Molecules 413
- 10.3 Functional Groups 417
- 10.4 How Aspirin Works: Function Follows Form 421
- 10.5 Modern Drug Design 424
- 10.6 Give These Molecules a Hand! 428
- 10.7 Steroids 432

- 10.8 Prescription, Generic, and Over-the-Counter Medicines 434
- 10.9 Herbal Medicine 437
- 10.10 Drugs of Abuse 440

- Conclusion 444**
- Chapter Summary 445**
- Questions 445**

**Chapter 11****Nutrition: Food for Thought 450**

- 11.1 Food and the Planet 452
- 11.2 You Are What You Eat 454
- 11.3 Fats and Oils 456
- 11.4 Fats, Oils, and Your Diet 460
- 11.5 Carbohydrates: Sweet and Starchy 465
- 11.6 How Sweet It Is: Sugars and Sugar Substitutes 467
- 11.7 Proteins: First Among Equals 470
- 11.8 Vitamins and Minerals: The Other Essentials 473
- 11.9 Energy from Food 477
- 11.10 Dietary Advice: Quality Versus Quantity 481
- 11.11 From Field to Fork 483
- 11.12 Feeding a Hungry World 486

- Conclusion 489**
- Chapter Summary 489**
- Questions 490**

**Chapter 12****Genetic Engineering and the Molecules of Life 494**

- 12.1 Stronger and Better Corn Plants? 495
- 12.2 A Chemical That Codes Life 497
- 12.3 The Double Helix of DNA 501
- 12.4 Cracking the Chemical Code 506
- 12.5 Proteins: Form to Function 507
- 12.6 The Process of Genetic Engineering 511
- 12.7 Making Chemical Synthesis Green from Genetic Engineering 515
- 12.8 The New Frankenstein 517

- Conclusion 519**
- Chapter Summary 520**
- Questions 520**

**Preface**

**Appendix 1**

Measure for Measure: Metric Prefixes, Conversion Factors, and Constants A-1

**Appendix 2**

The Power of Exponents A-2

**Appendix 3**

Clearing the Logjam A-3

**Appendix 4**

Answers to Your Turn Questions Not Answered in the Text A-4

**Appendix 5**

Answers to Selected End-of-Chapter Questions Indicated in Color in the Text A-16

Glossary G-1

Credits C-1

Index I-1

# Index

- A**  
absorption  
  climate change and, 109, 121–122, 136, 141  
  photosynthesis and, 175  
  radiation and, 309  
acid deposition, 280  
  combustion of coal and, 261–263  
  dry form of, 260  
  haze and, 274–278  
  human health and, 274–278  
  lakes and, 278–279  
  material effects of, 270–274  
  national monuments and, 273  
  streams and, 278–279  
  wet form of, 260  
acid-neutralizing capacity, 279  
acids  
  acetylsalicylic, 413, 418–419, 423  
  adipic, 386, 390  
  aerosols and, 260–261, 271f, 274–278  
  agriculture and, 247, 264, 267–268  
  amino, 389–390, 421, 428, 430, 439, 470–474, 506–511, 515, 520  
  anthropogenic emissions and, 249, 268  
  aqueous solutions and, 248–252  
  ascorbic, 248f, 474  
  automobiles and, 263–264, 272  
  bases and, 247, 249–252, 278–279  
  calcium and, 248, 255–256, 272–273, 279  
  carbonate ion and, 247–249, 254–255, 279  
  carbon dioxide and, 248–250, 253–261, 270  
  carboxylic, 385–390, 400–401, 414, 417–419  
  Central Analytical Laboratory and, 258  
  chemical reactions and, 248, 251, 260, 267, 276  
  Clean Air Visibility Rule and, 276–277  
  coal burning and, 249, 257, 260–264, 270, 274–275, 277–278, 280  
  combustion and, 247, 249, 257, 260–264, 267–268, 270, 274–275, 277–278, 280  
  coral reefs and, 246–247, 255–256  
  deoxyribonucleic acid (DNA) and, 497–507, 510–516, 520  
  deposition of, 260–263, 270–280  
  diesel and, 262  
  effects on materials, 270–274  
  electric charge and, 248  
  Environmental Protection Agency (EPA) and, 276–279  
  fatty, 456–464, 478, 489  
  fertilizers and, 251, 265, 267–268  
  fog and, 253f, 260, 263–264, 269–270, 277–280  
  fossil fuels and, 262, 264, 267, 270, 277–280  
  gasoline and, 262–264  
  green chemistry and, 264  
  haze and, 260, 271f, 274–278  
  heat and, 249, 262, 264, 268, 272  
  hydrogen ions and, 248–254, 259–260, 272, 279  
  ions and, 247–255, 259–261, 265f, 266–268, 272, 275, 279  
  lakes and, 278–279  
  lead-acid batteries and, 335, 338, 340f, 341–345  
  NADP/NTN and, 257  
  National Acid Precipitation Assessment Program (NAPAP) and, 270–271  
  neutralization and, 251–252  
  nitrogen and, 247, 249, 259–260, 263–264, 265f, 268, 271f, 279  
  oceans and, 246–249, 254–256, 268, 280  
  Ohio River valley and, 259  
  oleic, 458–462  
  ozone and, 262, 268  
  paint and, 272  
  phenylpyruvic, 473  
  pH scale and, 247, 252–259, 263–264, 270–272, 276, 278–280, A-3  
  polylactic (PLA), 386f, 400–401  
  polymers and, 381f, 382, 385–391, 394, 400–401  
  power plants and, 251, 262–264, 274  
  properties of, 248–249  
  rain and, 247, 249, 252–280  
  smoke and, 274, 277  
  soil and, 253, 257, 265–268, 271f, 274, 278–279  
  solutions and, 216, 248–254, 257–258, 261f, 298–299, 342  
  stearic, 457–460  
  streams and, 278–279  
  strong, 248, 252, 264  
  sulfur dioxide and, 247, 249, 259–263, 268–270, 274, 280  
  sulfuric, 43, 259–262, 274–277  
  Sun and, 264, 268, 270, 275–276, 280  
  sustainability and, 270, 287  
  United States and, 257, 259–260, 262, 264, 268–270, 273, 276, 278, 280  
  usefulness of, 247  
  waste and, 247  
  water and, 247–268, 271–279  
  weather and, 260, 277  
activation energy, 182  
active site, 510  
aerosols  
  acids and, 260–261, 271f, 274–278  
  climate change and, 107–108, 131, 134–138  
  coal and, 136  
  ozone and, 89  
  pollution and, 42–43  
  smoke and, 23, 29–30, 42, 45, 49–50, 53, 136, 274, 277, 323  
  sulfuric, 275–276  
agriculture  
  acids and, 247, 264, 267–268  
  air quality and, 45  
  biofuels and, 183, 191f, 193  
  climate change and, 110, 118, 132  
  fertilizers and, 4, 35, 45, 131f, 132, 193–195, 216, 225–226, 227f, 232, 251, 265, 267–268, 452, 468, 484, 486–487  
  genetically modified (GM) food and, 495, 517–520  
  genetic engineering and, 184, 495, 511–520  
  land stress and, 489  
  polymers and, 395  
  soil and, 193, 195 (see also soil)  
  sustainability and, 4–5, 191f  
  transgenic crops and, 514–516, 518, 520  
  USDA and, 478  
  UV radiation and, 93  
  water and, 203, 210–211, 214, 216–217, 227f, 233f, 236–237, 452–454  
  See also nutrition; specific crop  
air quality, 4  
  acids and, 277 (see also acids)  
  aerosols and, 42–43  
  agriculture and, 45  
  allergies and, 49  
  ambient air and, 24, 131  
  ammonia and, 45, 89  
  automobiles and, 39–40, 43  
  benzene and, 49, 51f  
  cancer and, 49, 53  
  cap-and-trade system and, 146  
  carbon dioxide and, 3, 9, 17–18, 20–21, 31, 33, 37–38, 40, 43–44, 55–56  
  carbon monoxide and, 21–25, 28, 30, 33, 35, 37–40, 43–44, 49–50, 53–56  
  China and, 274, 275f, 277–278  
  Clean Air Act and, 24, 26, 43, 181, 269, 276, 278, 280  
  Clean Air Visibility Rule and, 276–277  
  coal and, 22–23, 37, 42–43, 46, 56  
  composition of breath and, 17–23, 26–29, 53–56  
  concentration and, 25  
  diesel and, 43, 45  
  direct sources of pollution and, 42–46  
  Donora, Pennsylvania and, 277  
  dry air and, 19–20, 34, 217  
  Environmental Protection Agency (EPA) and, 24, 28–29, 43, 46  
  exposure and, 24  
  fog and, 19, 40, 49, 209, 253f, 260, 263–264, 269, 270, 277–280  
  formaldehyde and, 49, 51f  
  fossil fuels and, 21  
  gasoline and, 39–41, 43–45, 56  
  green chemistry and, 26–27, 29–30, 51–52, 56  
  greenhouse gases and, 26, 48, 52 (see also greenhouse gases)  
  haze and, 30, 43, 68, 260, 271f, 274–278, 357  
  human nose and, 18  
  hybrid electric vehicles and, (HEVs) and, 345–347  
  hydrocarbons and, 36, 39–44  
  hydrogen and, 248–249, 251–254, 257–260, 265, 272, 275–276, 279  
  indoor, 49–53  
  London and, 17, 277  
  matter classifications and, 30–33  
  megacities and, 30  
  methane and, 31, 36, 39–40, 44  
  Montreal Protocol and, 82, 94–98, 101, 135  
  National Ambient Air Quality Standards and, 24  
  nitrogen and, 3, 18–26, 30–31, 34–36, 39, 42–44, 47–50, 55  
  nuclear power and, 324  
  oxygen and, 18–22, 30–36, 39–42, 44  
  ozone and, 5f, 17, 21–25, 28–30, 35–36, 42, 44–49, 54, 56, 181  
  paint and, 17, 36, 50–52  
  particulate matter (PM) and, 21–25, 29, 43, 45–46, 49–50  
  photovoltaic cells and, 356–358  
  pollutants and, 23–26, 42–46  
  Pollution Prevention Act and, 26–27  
  primers and, 52  
  radon and, 53  
  rate of breathing and, 25  
  recycling and, 30  
  risk assessment and, 23–26  
  secondary pollutants and, 46–49  
  sick building syndrome and, 49  
  smog and, 17, 21–22, 27, 29f, 44, 66, 229, 268, 277f, 357, 376  
  smoke and, 23, 29–30, 42, 45–46, 49–50, 53, 136, 165, 261–263, 274, 277, 323, 394  
  sulfur dioxide and, 21–26, 28, 30–31, 35, 38, 42–43, 49, 56  
  sulfur trioxide and, 42–43, 259, 261, 274  
  Sun and, 28–29, 45–49, 52, 55  
  sustainability and, 29, 52  
  toxicity and, 24–25, 55  
  troposphere and, 29–30, 34, 46–47, 217, 225, 268  
  United States and, 24, 26–27, 41–45, 48, 51–52  
  urban growth and, 21  
  U.S. Clean Air Act and, 26  
  varnish and, 44, 50–52  
  vinyl chloride and, 51f  
  volatile organic compounds (VOCs) and, 13, 42, 44–52, 181, 228, 264

  - Zoloft, 432, 438
- dry air, 19–20, 34, 217
- DuPont Company, 89, 100, 390

## E

- Earth
- albedo and, 135–136
  - biodiversity and, 6, 139, 141, 192
  - as blue marble, 2–3, 13
  - carbon cycle and, 79, 107, 124–125, 144, 175, 212
  - deforestation and, 124f, 125, 131t, 134, 136, 144, 184, 193
  - ecological footprint and, 9–11, 323
  - freshwater and, 140–141, 203, 207, 214, 237, 261
  - global warming and, 86, 99–100, 107, 110, 112, 125, 130–136, 139, 143, 147–148, 335, 363
  - oceans of, 13, 79, 87, 107–108, 111
  - solar irradiance and, 134–135
  - space photographs of, 3
  - sustainability and, 4 (*see also* sustainability)
  - U.S. consumption rate equation and, 11
  - water and, 202–241
- Earth Observing System (EOS) *Aura*, 68
- earthquakes, 4, 208, 290, 298, 305, 326
- Earth Summit, 145–146
- echinacea, 437
- E. coli*, 488, 503t, 515
- ecological footprint, 9–11, 323
- Ehrlich, Paul, 425, 486
- Einstein, Albert, 78, 290–292, 294
- electrical circuits, 30, 219, 337, 339, 350, 355, 359–360
- electric charge
- acids and, 248
  - anions and, 217t, 220–224
  - cations and, 217t, 220–224
  - electronegativity and, 122, 204–206, 221
  - free radicals and, 75, 87–90, 131, 307, 376, 389
  - ions and, 132, 221 (*see also* ions)
  - isotopes and, 71, 114, 126, 232, 287, 291–293, 299–319, 323, 335, 477
  - neutral solutions and, 251–252

- outer electrons and, 69–75, 90, 116–120, 166, 220–223, 344, 359
  - polymers and, 378
  - valence electrons and, 69, 73, 220–223, 359
- electricity
- anodes and, 337–342, 349–350, 354f, 355, 356f
  - aqueous solutions and, 227, 338–339, 353
  - atomic structure and, 68
  - automobiles and, 336–343, 347, 358
  - batteries and, 157, 219, 335–354, 358–359, 363, 366
  - cadmium and, 335, 337, 340t, 343–344
  - cathodes and, 337–342, 349–350, 354f, 355, 356f
  - China and, 270
  - conductivity meter and, 219
  - current and, 336–337, 339–340, 342, 346–347, 349, 352–354, 356–361, 366
  - demand for, 270
  - diatomic gases and, 123
  - distributed generation and, 351–352
  - electrolytes and, 338, 341f, 342, 349, 351, 354–355
  - as electron flow, 337
  - fossil fuels and, 155–163, 169, 249, 257, 261–262, 264, 277, 335, 350, 353–356, 361–364, 367
  - fuel cells and, 160, 257, 306, 336, 347–356, 363, 366
  - galvanic cells and, 336–342, 350, 354–355, 367
  - geothermal energy and, 325, 335, 366
  - green chemistry and, 400
  - half-reaction and, 336–339, 341, 349–350, 367
  - heat and, 335, 348, 350–355, 358, 360–366
  - hybrid electric vehicles (HEVs) and, 345–347
  - hydrogen ions and, 349–350, 353, 355
  - insulators and, 380, 381t, 384
  - ions and, 337, 340t, 347, 349, 353 (*see also* ions)
  - lead-acid batteries and, 335, 338, 340t, 341–342, 344–345
  - lightning and, 23, 65–66, 268, 334–335
  - lithium and, 335, 337, 340, 344–345, 347, 349f, 353
  - metals and, 32
  - nuclear power and, 287–290, 292, 296–300, 302, 305, 323–325, 328, 25146
  - oceans and, 366
  - oxidation and, 272, 336–343, 349, 355, 367
  - ozone and, 22, 65–66
  - PCBs and, 229
  - photovoltaic cells and, 336, 356–363, 366
  - power plants and, 42 (*see also* power plants)
  - radiation and, 358, 361
  - reduction and, 336–339, 342, 349–350, 367
  - salt and, 219–220
  - semiconductors and, 32, 359–364
  - solar energy and, 336, 342, 353, 355–366
  - solutions and, 338, 342, 353–355, 359
  - Sun and, 335, 353, 355–366
  - United States and, 344–345, 347, 352, 354, 356–357, 362
  - voltage and, 257, 337–340, 343, 354, 359
  - water and, 226, 366
- electrochemical cells, 335–341, 348–349, 354–355, 356f
- electrodes, 257, 344
- anodes and, 337–342, 349–350, 354f, 355, 356f
  - cathodes and, 337–342, 349–350, 354f, 355, 356f

- electrolysis, 354
- electrolytes

  - electricity and, 338, 341f, 342, 349, 351, 354–355
  - solutions and, 219, 226, 338, 341f, 342, 349, 351, 354–355

- electrolytic cell, 354
- electromagnetic spectrum

  - gamma rays and, 77, 297, 300, 304, 306
  - infrared (IR) radiation and, 77–79, 99–100, 108–110, 121–123, 130–133, 133t, 287, 300, 306
  - microwaves and, 77, 123, 300
  - radar and, 77, 123, 380
  - radio waves and, 77, 79
  - UV radiation and, 77 (*see also* ultraviolet (UV) radiation)
  - wavelength and, 22, 75–85, 108–109, 121–123, 287, 300, 308–309, 355
  - X-rays and, 77, 80, 300, 306–308, 309t, 311t, 501–502

- electronegativity, 122, 204–206, 221
- electron pairs

  - hydrogen and, 204
  - molecules and, 72, 116–120
  - oxygen and, 204
  - polar covalent bond and, 205
  - repulsion and, 120

- electrons, 68

  - anodes and, 337–342, 349–350, 354f, 355, 356f
  - beta particles and, 300–301, 304, 306, 308, 311, 314, 318, 320
  - cathodes and, 337–342, 349–350, 354f, 355, 356f
  - covalent bonds and, 72–74, 121, 166, 176t, 204–207, 220–223, 227–230, 374–375, 378, 390, 400, 414, 417, 499, 501, 509
  - doping and, 359
  - drugs and, 414, 416–417, 420
  - free radicals and, 75, 87–90, 131, 307, 376, 389
  - half-reactions and, 336–339, 341, 349–350, 367
  - isotopes and, 71, 114, 126, 232, 287, 291–293, 299, 301–302, 304, 306, 308, 310–319, 335
  - octet rule and, 72–75, 116, 119, 166, 248
  - outer, 69–75, 73, 90, 116–120, 166, 220–223, 344, 359
  - oxidation and, 272, 336–343, 349, 355, 367
  - photovoltaic cells and, 356–363
  - polar/nonpolar covalent bonds and, 205
  - polymers and, 376–378, 383
  - potential energy and, 69
  - semiconductors and, 32, 359–364
  - valence, 69, 73, 220–223, 359
  - voltage and, 257, 337–340, 343, 354, 359

- elements, 30

  - atomic mass and, 71, 107, 126–130, 173, 291, 294
  - atomic number and, 68–71, 126, 292–293, 300t, 301, 308
  - atoms and, 33–34
  - Avogadro's number and, 127–128, 130
  - gases and, 31
  - half-life and, 312, 315–319, 322, 328
  - halogens and, 32, 70, 88, 222
  - isotopes and, 71, 114, 126, 232, 287, 291–293, 299–319, 323, 335, 477
  - liquids and, 31
  - mass and, 126–127
  - mass number and, 71, 126, 292–294, 300t, 301
  - metalloids and, 32, 205
  - metals and, 32, 70, 205, 271
  - molar mass and, 128–130, 168–170, 173, 189, 204, 218, 262
  - naturally occurring, 31

- noble gases and, 32–33, 53, 70, 205t
- nonmetals and, 32, 205
- periodic table and, 31–32, 68–72, 126–128, 150, 205, 221, 271, 291, 293, 318, 344, 359, 374, 475–476
- solids and, 31

## El Niño, 114

## endocrine disruptors, 403

## endothermic reactions, 175–176, 353

## energy

- activation, 182
- biofuels and, 155, 174, 180t, 181–195, 216, 227–228
- bond, 176
- calorie unit for, 160, 208, 211
- calorimeter and, 172–173
- cup-and-trade system and, 146
- changes at molecular level, 175–178
- Chapman cycle and, 81, 86
- coal and, 260
- combustion and, 154–195 (*see also* combustion)
- conversion of, 157
- covalent bonds and, 72–74, 121, 166, 176t, 204–207, 220–223, 227–230, 374–375, 378, 390, 400, 414, 417, 499, 501, 509
- Earth's balance of, 108–111
- Einstein and, 290–292, 294
- electricity and, 334–366 (*see also* electricity)
- endothermic reactions and, 175–176, 353
- entropy and, 161
- exothermic reactions and, 174–175, 177, 182
- fats and, 478
- first law of thermodynamics and, 158
- Fischer-Tropsch process and, 182
- food and, 477–480 (*see also* nutrition)
- fossil fuels and, 155–165, 169–170, 183, 191–196 (*see also* fossil fuels)
- functional group and, 185
- geothermal, 192, 270, 325, 335, 366
- glycogen and, 466, 480
- green chemistry and, 190
- greenhouse effect and, 12, 107, 109–111, 116, 121–123, 125, 130
- heat and, 249, 262, 264, 268, 272 (*see also* heat)
- heat of combustion and, 173–174, 178, 190, 348
- Industrial Revolution and, 56, 112, 155, 161
- infrared (IR) radiation and, 77–79, 99–100, 108–110, 121–123, 130–133, 287, 300, 306
- joule (J) unit and, 160, 194, 208, 295, 309
- kinetic, 157, 159–160, 172–173
- law of conservation of, 158–159
- mass/energy equivalence and, 290–291, 294, 299

 nuclear power and, 287  
 nutrition and, 471–472  
 oceans and, 87, 132  
 organic chemistry and, 413–414  
 ozone and, 87–88  
 polyatomic anions and, 223  
 polymers and, 389  
 proteins and, 471–472  
 reactive, 265–267  
 soil and, 87, 132, 266  
 triple bond of, 74
- nitrogen dioxide  
 acids and, 249, 259, 264, 265f  
 air quality and, 21–22, 24, 26, 30, 35–36, 42, 44, 47, 49  
 automobiles and, 132  
 brown color of, 22  
 coal and, 22  
 Sun and, 264
- nitrogen-fixing bacteria, 265–266
- nitrogen monoxide  
 acids and, 259, 264, 265f  
 air quality and, 22, 36, 39, 42, 44
- automobiles and, 132  
 brown color of, 22  
 coal and, 22  
 Sun and, 264
- nitrogen-fixing bacteria, 265–266
- nitrogen monoxide  
 acids and, 259, 264, 265f  
 air quality and, 22, 36, 39, 42, 44
- automobiles and, 132  
 climate change and, 129  
 nuclear power and, 287  
 ozone and, 87
- nitrous oxide, 87, 110, 122, 130–132, 135, 145, 265f, 484
- noble gases, 32–33, 53, 70, 205f
- nonelectrolytes, 219
- nonmetals, 32, 205
- nonpolar covalent bonds, 205
- nonsteroidal anti-inflammatory drugs (NSAIDs), 422–423, 436
- n-type semiconductor, 359–360
- nuclear power  
 alpha particles and, 297, 300–301, 306, 308, 311, 315, 320  
 am-<sup>235</sup>U and, 297  
 aqueous solutions and, 298  
 ash generation and, 324  
 atomic number and, 292–293, 300f, 301, 308  
 beta particles and, 300–301, 304, 306, 308, 311, 314, 318, 320  
 breeder reactors and, 314, 320–321  
 cancer and, 287, 301, 304–308, 311, 324, 477  
 chain reactions and, 293–295, 297–298, 328  
 chemical reactions and, 303, 305–306, 313  
 Chernobyl plant and, 302–307, 310, 312, 318, 325, 328  
 China and, 290  
 control rods and, 296f, 298, 302, 312  
 cooling system for, 296–299, 302, 305, 320, 322  
 costs of, 287, 323, 326–327  
 critical mass and, 293, 313  
 ecological footprint of, 323  
 Einstein and, 290–292, 294  
 electricity and, 287–290, 292, 296–300, 302, 305, 323–325, 328  
 fission and, 290–296, 312, 316f  
 fuel rods and, 296f, 297f, 306, 314, 316f, 319–320

nuclear power—*cont'd.*

- Fukushima Daiichi plant and, 290, 302, 305–306, 325–326
- future of, 325–328
- gamma rays and, 77, 297, 300, 304, 306
- gaseous diffusion and, 313
- greenhouse gases and, 324–325
- half-life and, 312, 315–319, 322, 328
- health issues of, 306–312, 318–319, 324–325
- heat and, 296–299, 302–303, 305, 313
- hormones and, 304, 307
- huge construction sites for, 289
- hydrogen and, 287, 292, 301, 303–306, 312, 317
- India and, 290
- iodine and, 304, 307, 312, 316f, 319, 328
- ionizing radiation and, 306–312, 328
- isotopes and, 287, 291–293, 301–302, 304, 306, 308, 310–319, 323, 335
- Japan and, 290, 298, 302, 304–305, 307, 320, 325–326
- mass/energy equivalence and, 290–291, 294, 299
- mercury release and, 324
- mill waste and, 325
- mine worker safety and, 324
- moderators and, 298
- neutrons and, 291–294, 297–303, 306, 312–314, 318
- Nevada test site and, 295
- nitrogen monoxide and, 287
- oceans and, 299
- Palo Verde reactors and, 299
- periodic table and, 291, 293, 318
- Plant Vogtle and, 289
- plutonium and, 31, 292, 297, 301, 303, 314–322, 336
- politics of, 287
- poo-bee and, 297
- power plants and, 287–293, 296–299, 302–306, 310, 312, 315, 323–326
- Priscilla test and, 295f
- process of, 292
- producing energy from, 290–296
- protons and, 292–294, 300–301, 302f
- radiation and, 300–312, 320, 323–325, 328
- radioisotopes and, 71, 287, 301–302, 304, 306, 308, 310–312, 315–319
- radon and, 287, 301–302, 307–308, 311, 316f, 324–325
- recycling and, 315, 320
- risk/benefit analysis of, 323–325
- Russia and, 302–307, 310–315, 318, 325, 328
- Seabrook plant and, 299
- spent nuclear fuel (SNF), 287, 319–320, 350
- strontium and, 312, 316f, 318–319, 328
- sulfur dioxide and, 287
- Sun and, 287, 290–291
- sustainability and, 325
- thorium and, 301, 316f, 324
- Three Mile Island plant and, 305, 325–326
- United States and, 288–289, 292, 295, 299, 302–303, 305, 311, 313–314, 319–328
- UNSCEAR and, 304, 310
- uranium and, 287, 291–302, 306–308, 312–317, 320, 324–328
- Virgil C. Summer plant and, 289
- vitrification and, 322
- waste and, 287, 302, 312, 314–315, 318–328, 336, 350
- worldwide use of, 288–290
- Yucca Mountain and, 322
- zirconium and, 297, 306

## Nuclear Regulatory Commission (NRC), 6, 288, 313, 319, 326

## Nuclear Waste Policy Amendments Act, 322

- nuclear weapons, 31, 287
  - chain reaction needed for, 295, 312
  - critical mass and, 293
  - Hiroshima and, 295, 312
  - Nagasaki and, 295, 312, 314
  - plutonium and, 314–315, 319
  - radiation and, 299, 309f, 310–312, 318
  - security risks and, 319, 327
  - uranium and, 312–315, 327
  - U.S. Nevada test site and, 295
- nucleotides, 499–507
- nucleus, 68
- nutrition
  - allergies and, 451
  - amino acids and, 470–474
  - animals and, 450
  - bacteria and, 466, 486–488
  - Basic Four and, 481
  - butter and, 188, 456, 460, 461f, 463
  - calories and, 451, 455–456, 460–461, 466–469, 472, 478–483
  - calcium and, 456, 475–476
  - carbohydrates and, 450, 455–456, 461, 465–467, 477–478, 482, 489
  - carboxylic acid and, 457–458, 470
  - Centers for Disease Control and, 455
  - cholesterol and, 455–456, 460–461, 463, 482
  - dietary advice and, 481–483
  - eating local and, 483–485
  - energy and, 477–480
  - enzymes and, 455, 458, 464, 466, 468, 470, 473–474, 478
  - fats and, 451, 455–465, 473–475, 477–483, 488–489
  - fatty acids and, 456–464, 478, 489
  - fertilizers and, 452, 468, 484, 486–487
  - Food and Agriculture Organization (FAO) and, 452, 486
  - food choices and, 451
  - food pyramid and, 481
  - functional groups and, 456, 458, 460, 470, 473
  - genetically modified (GM) food and, 495, 517–520
  - genetics and, 495, 499–500, 506, 508, 516–520
  - global hunger and, 486–489
  - glycerol and, 456–458, 489
  - glycogen and, 466, 480
  - green chemistry and, 464, 488
  - Green Revolution and, 267, 486–489, 519
  - Health Professionals Follow Up Study and, 482
  - high-fructose corn syrup (HFCS) and, 468
  - hormones and, 470, 476, 478, 482–483
  - hydrogenation and, 462–464, 482
  - interesterification and, 464
  - ions and, 454–455, 475–476, 486–487
  - isomers and, 462, 465
  - junk food and, 454–455, 468, 473, 488
  - lipids and, 456–457, 460, 464, 473–474
  - malnutrition and, 455, 472, 479
  - meat consumption and, 453–454, 489
  - metabolism and, 454–455, 466, 468, 471–481
  - minerals and, 455–456, 470, 473–477, 489
  - monomers and, 466, 470
  - Nurses' Health Study and, 482
  - obesity and, 4, 455, 467–468, 482
  - oils and, 455–465, 475, 481–482
  - oleic acid and, 458–462
  - olive oil and, 188, 456, 461f, 462
  - organic/natural food and, 455, 473
  - peanut butter and, 455f, 456, 468, 472
  - photosynthesis and, 477
  - polymers and, 465–466, 470
  - population growth and, 486
  - processed food and, 455, 468, 473, 488

- proteins and, 452, 455–456, 461, 463, 470–475, 477–478, 482–483, 488–489
- rice and, 465, 472, 485f, 486
- soil and, 452, 484, 486–488
- starches and, 465–467
- stearic acid and, 457–460
- strokes and, 463
- sugars and, 392, 451, 455–456, 461, 465–469, 472–473, 478, 482–483
- sustainability and, 452–454
- undernourishment and, 455, 479, 486
- vegetarians and, 450–454, 472, 484–485
- vitamins and, 430, 439, 449, 455–456, 461, 473–477, 489
- wheat and, 472, 486
- nylon, 132, 373–374, 386f, 387, 389–391, 507–508

## O

- obesity, 4, 455, 467–468, 482
- oceans, 13, 203
  - acidification of, 246–249, 253–256, 268, 280
  - as aqueous solutions, 225–227
  - carbon dioxide and, 111, 125, 131, 141–142, 158
  - changing chemistry of, 141
  - climate change and, 107–108, 111, 114, 124f, 125, 131–132, 134, 136, 139–142, 208
  - coral reefs and, 246–247, 255–256
  - desalination and, 209, 213, 237–239
  - dissolution and, 131
  - electricity and, 366
  - hydrogen and, 114
  - infrared (IR) radiation and, 79
  - ions and, 225–227
  - natural aerosols and, 136
  - nitrogen and, 87, 132
  - ozone and, 87
  - plankton and, 141
  - power plants and, 299
  - sea ice and, 140
  - sea-level rise and, 140–141
  - sulfur and, 268
- octane, 36, 40, 44, 179–181, 187, 348
- octet rule
  - beryllium and, 116
  - hydrogen and, 116
  - molecules and, 72–75, 116, 119, 166, 248
- oil
  - CFCs and, 89
  - climate change and, 111, 126, 132, 143–144
  - combustion and, 155, 166, 168–171, 178–179, 181–189, 192, 194–195
  - cracking and, 8, 168, 178–179
  - cradle-to-grave thinking and, 8
  - cradle-to-where concept and, 8–9
  - crude, 4, 8, 39, 52, 166, 168–170, 178, 183, 185, 192, 344, 374, 404 (*see also* petroleum)
  - fracking and, 171
  - gasoline and, 4 (*see also* gasoline)
  - hydrocarbons and, 39 (*see also* hydrocarbons)
