Abstract

This study was conducted in the academic year 2009-2010 at John B. Lacson Foundation Maritime University-Molo, Inc. in order to determine the vices and experienced effects among BSCA students. The 120 respondents were selected through stratified random sampling method. The researcher-made questionnaire was used as the research instrument. The data gathered were subjected to descriptive statistics, using the frequency count, percentage and mode. Majority of the BSCA students have vices. Smoking ranks as the most prevalent vice when classified as a whole and when classified according to sex and place of origin. The top experienced effect of smoking is bad breath, the experienced effect of gambling, computer gaming and taking illegal drugs is no time for studying. The experienced effect of drinking alcoholic beverages is hangover.
